1 Setting Up

Safety precautions

WARNING! Read and observe these precautions and all others in this manual to reduce the risk of injury and equipment damage.

• Do not look directly into the lens when the lamp is on.
• Do not expose the projector to rain or moisture, and do not use it near water.
• Do not subject the projector to physical abuse or misuse such as exposure to smoke, unusual stresses, or excessive or continuous (24/7) operation.
• Keep paper, plastic, and combustible material at least 0.5 m (2 ft) away from the projector’s lens and exhaust vents.
• Do not allow liquid, food, or small objects to get inside the projector. If material gets inside the projector, contact HP for assistance.
• Do not put anything on top of the projector. Do not place any liquids where they might spill on the projector.
• Do not block any vents on the projector. Do not place the projector near any source of heat, such as a radiator or amplifier.
• Use only an approved power cord rated for the voltage and current marked on the product label. Do not overload any outlet or extension cord. Do not circumvent the grounding prong on the power cord.
• Route all cables so they are not located where people can step on them or trip on them.
• Place the projector flat on its base on a sturdy surface or on an HP ceiling mount. Do not stand the projector on its front surface.
• Do not touch the lens with your fingers. See “Cleaning the projector lens” on page 39. Use a soft, dry cloth to clean the projector case.
• Do not open the projector except as instructed by this manual, and only after allowing the projector to cool down.
• If the projector is damaged in any way, contact HP for assistance.
What’s in the box?

Before setting up your projector, be sure its shipping box includes the following items. If the shipping box does not contain all of the following items, contact HP.

**TIP:** After you open the box and remove the contents, save the box in case you must ship the projector.

Identifying the contents of the box

</tbody>
</table>

Accessories

Get more from your presentations with HP projector accessories. You can purchase accessories at http://www.hp.com or through your projector dealer.

- **HP ceiling mount kit**—enables you to simply and discreetly install your projector on the ceiling.
- **HP projection screens**—mobile screens that are easy to carry and set up anywhere, and fixed screens for even greater convenience.
- **HP premium remote control**—allows you to control every aspect of your presentations.
- **HP power cables**—allow you to connect in any region.
- **HP cables**—allow you to connect all audio-video equipment.
- **HP replacement lamp**—brings your projector up to factory-fresh brightness.
- **HP pn1050 Jetdirect projector server**—enables you to connect your projector directly to a network, and manage it from anywhere on the network.
- **HP projector carrying case**—enables you to transport your projector safely.
- **HP SCART to composite S-video adapter**—allows you to connect SCART devices.
Setting up the projector

Positioning the projector

The following tables show you where to position the projector in relation to the screen.

**TIP:** For more information on adjusting the picture, see “Making basic adjustments” on page 25 and “Adjusting the Projector” on page 29.
If you do not want to use the distance table, you can use the following equations to help determine where to install the projector relative to the screen.

**Calculating projection distances**

- Distance from lens to screen = \( A \times \) width of screen
- Minimum and maximum distance from screen = \( B \)
- Width of screen = 0.8 \( \times \) diagonal of screen (for 4:3 screen)
- Projector lens below bottom of screen = \( C \times \) width of screen (for 4:3 screen, with projector sitting level)

**xp7010/xp7030 series**

- \( A = 1.6 \) to 2.0
- \( B = 1.2 \) to 10 m (4 to 33 ft)
- \( C = 0.12 \)

<table>
<thead>
<tr>
<th>Image size (diagonal)</th>

<td>6.4</td>
<td>200 (5.1) 328 to 394 (8.3 to 10.0)</td>
</tr>
</tbody>
</table>
Connecting power

1. Place the projector on a stable platform located 1.2 to 10 m (4 to 33 ft) in front of the screen. Ideally, the platform should be lower than the bottom of the screen.

2. Connect one end of the power cord to the back of the projector and the other end to a grounded electrical outlet.

3. Turn on the disconnect switch on the side of the projector.

If you want to permanently install the projector on the ceiling or behind the screen, see “Installing the projector” on page 44.
Connecting a computer

Requires:

- VGA cable or other video source cable
- USB cable (optional)
- Audio cable, mini-phone (optional)

The optional USB connection allows you to use the mouse and page up/down features on the remote control.

See “Showing a computer screen” on page 28.

**TIP:** If the computer display does not appear on the projector, you might have to press a combination of keys on the computer to turn on the computer’s VGA output. For example, on some computers you must press FN+F4 or FN+F5. For instructions, refer to the user documentation provided with your computer.

**TIP:** You can connect an external computer monitor to the VGA-out port on the projector. The monitor displays the signal connected to the VGA-in port—even if the projector is turned off or showing a different input.
Connecting a handheld organizer

Not all handhelds come with VGA-out ports. For example, an iPAQ Pocket PC may require a VGA-out PC Card with 15-pin connector. If necessary, install a VGA-out accessory card into the organizer.

Requires:

- VGA cable ①
- VGA-out accessory card ② (in some cases)
Connecting a video source

Many video devices have more than one type of output port. When you connect the device to the projector, choose the connection that provides the best picture quality. This list shows video connections in order with highest picture quality at the top:

• DVI connection (highest quality)
• Component-video connection
• S-video connection
• Composite-video connection

The video and audio cables shown in the following sections are available from HP.

If you want to connect a SCART video device to the projector, you will need a SCART adapter (available from HP).

Connecting a DVI source

The DVI port is available only on certain models. It supports only DVI digital sources.
Examples: Cable boxes, satellite receivers, and some computers

Requires:
• DVI-D cable 1
• Audio cable, mini-phone 2 (optional)
Connecting a component-video source with a component-to-VGA cable

Examples: Cable boxes, DVD players, satellite receivers, and audio-video receivers

Requires:

- Component-to-VGA cable ①
- Audio cable, mini-phone ② (optional)

**TIP:** Many DVD players and other high-quality video devices provide component video output through three RCA connectors (which might be labeled YPbPr or YCbCr). Connect the component-to-VGA cable to the video device’s RCA connectors and the projector’s VGA-in port.

If possible, configure the video source to use progressive scan output, such as 480p, 575p, or 720p. For additional information, refer to the user documentation provided with the video source.
Connecting an RCA component-video source (certain models only)

Examples: Cable boxes, DVD players, satellite receivers, and audio-video receivers

Requires:

- Standard component-video cable ①
- Audio cable, mini-phone ② (optional)

**TIP:** Many DVD players and other high-quality video devices provide component video output. The three RCA connectors might be labeled YPbPr or YCbCr.

If possible, configure the video source to use progressive scan output, such as 480p, 575p, or 720p. For additional information, refer to the user documentation provided with the video source.
Connecting an S-video source

Examples: DVD players, VCRs, cable boxes, camcorders, and video gaming devices

Requires:

• S-video cable 1
• Audio cable, mini-phone 2 (optional)
Connecting a composite-video source

Examples: VCRs, DVD players, audio-video receivers, and video gaming devices

Requires:

- Composite-video cable
- Audio cable, mini-phone, or combined video-audio cable (optional)
Turning the projector on and off

Turning the projector on

1. Be sure the power cord is connected and the disconnect switch is on.
2. Remove the lens cover 1.
3. Press the power button 2 on the projector or on the remote control.

   The projector takes a minute or so to warm up. The power button blinks during warm-up.

   TIP: If the picture does not appear on the screen, try the following:
   • If you are using a computer, press the key combination that turns on its video output. For example, press FN+F4 or FN+F5 on some computers.
   • On the projector, press the source button one or more times to select the correct input port.

   NOTE: It is normal for parts of the projector and the air coming out of the projector to be very warm. If the projector starts to overheat, the temperature warning light will turn on and the projector will shut down.
Turning the projector off

1. Press the power button on the projector or remote control to turn off the projector. Do not hold the button down.

   The power button blinks during the cool-down period, then the projector turns off. Even though the projector is off, it uses a small amount of power internally.

2. If you want, disconnect video and audio equipment from the projector during the cool-down period or after the power button stops blinking.

   **CAUTION:** Do not disconnect power or turn off the disconnect switch until the projector has cooled down (the fan stops) and the power button stops blinking. Otherwise, you might shorten the life of the lamp.

3. If you must unplug or remove the projector, wait until the power light stops blinking, then unplug the power cord.

   If you try to turn on the projector again during the cool-down period, it will not turn on. Wait until the cool-down period ends and the power button stops blinking.

Moving the projector

When moving the projector:

- Allow the projector to cool down before moving it. Then disconnect all cables.
- Avoid bumps and jolts. Use a carrying case or padded container when possible.
- Observe temperature and humidity limits (see “Specifications” on page 61). If the projector is cold, allow it to warm gradually to avoid condensation.
Making basic adjustments

This section provides instructions for making basic adjustments to the projector.

Aiming the projector

- To raise or lower the projected picture on the screen, press the height adjustment button 1 and raise or lower the front of the projector 2. Release the button to lock the adjustment.
- To level the picture on the screen, turn the adjustable feet 3 to lengthen or shorten.

Adjusting the focus and zoom

- Rotate the focus ring until the image becomes clear. The projector can be focused at distances of 1.2 to 10 m (4 to 33 ft).
- Rotate the zoom ring (with tab) to adjust the picture size (100% to 120%).

If the picture does not fit the screen, you might have to move the projector closer to or farther away from the screen.

TIP: For more information on adjusting the picture, see “Adjusting the Projector” on page 29.
## Using the remote control

</tr>
<tr>
<td>Switch to next input source</td>
<td>source button 9 one or more times.</td>
</tr>
</tbody>
</table>

**TIP:** From within the distance of 8 m (26 ft), aim the remote control at the screen or at the front or back of the projector.
2 Showing Presentations

Showing a computer screen

1. Be sure the computer is connected to the projector and turned on. See “Connecting a computer” on page 16.
2. Be sure the projector is set up, turned on, and adjusted. See “Making basic adjustments” on page 25.
3. If a different input source is shown on the projector, press the source button on the projector or remote control one or more times to select the VGA-in port.
4. If the computer display is not shown on the projector, you might have to turn on the computer’s video output port. For example, some computers require you to press a key combination, such as Fn+F4 or Fn+F5. Refer to the user documentation provided with your computer.

If you want to adjust the picture, see “Adjusting the picture and sound” on page 29.

Selecting a different source

If the picture from your video source does not appear on the screen, you can quickly select the correct source.

▲ Press the source button one or more times—until you see the picture or you see the name of the video port where the source is connected.

You should also be sure the video source is turned on and playing video.

Hiding or showing the picture

1. Press the hide button on the remote control to blank the picture, and to mute the audio (certain models only). This does not affect the video source, which continues playing.
2. Press any button to restore the picture, as well as the audio (certain models only).
3 Adjusting the Projector

You can change the projector’s settings through its built-in on-screen menu system, using the buttons on the projector or the remote control.

To access the on-screen menu, press enter on the projector or remote control.

For details, see “Using the on-screen menu” on page 38.

Adjusting the picture and sound

Choosing the best picture mode

You can quickly choose a different picture mode to make adjustments to the picture. Picture modes can control properties such as color and size. They let you easily choose the best settings for ambient lighting and the type of video content.

▲ Press the picture mode button one or more times to select the picture mode that gives the best picture.
You can also customize the picture modes so they are best for your video sources:

1. Press the picture mode button to select the picture mode you want to adjust.
2. Press enter and go to Picture > Customize picture mode.
3. Adjust the settings until you are satisfied with the picture.

**TIP:** To exit from any on-screen menu or adjustment, press the exit button.

To return to the most recently used menu item when no on-screen menu or adjustment is displayed, press the exit button.

---

**Adjusting the shape of the picture**

Depending on the type of video source you are viewing, the picture might or might not always look correct or fit on the screen:

- If the active video device sends widescreen output to the projector, press enter, go to Source, and set Widescreen input to On. See 1 in the following diagram.
- If the video device sends standard output, set Widescreen input to Off.

**TIP:** If you show widescreen pictures on a wide projection screen, a standard picture might not fit on the screen. One solution is to change the current picture mode so it makes a smaller picture. Press enter, go to Picture > Customize picture mode, and set Aspect Ratio to Reduced. See 2 in the following diagram.
Adjusting a slanted picture

If the projector is tilted up or down, the sides of the picture on the screen might slant in or out, even though the top and bottom are level. The keystone adjustment corrects this problem.

Adjust the picture using the keystone setting in the on-screen menu. Press enter, go to Setup > Keystone, and adjust until the picture looks correct.

**TIP:** If the projector is not perpendicular to the screen, the projected image may slant left or right. If this happens, turn the projector until the image is rectangular, with straight corners.
Adjusting the picture for best color

You can fine tune the picture settings on your projector to get the best color and image quality. You should perform these steps for each input source device and each input port that you use. Do them in the order shown. For some input ports, some of these settings may not be available.

1. Press the picture mode button and select the picture mode you want to use for the current source.
2. Press enter and go to the Picture menu.
3. Go to Color settings > Brightness. Adjust to the highest setting that still gives the darkest black for black areas.
4. Go to Color settings > Contrast. Adjust to the highest setting that does not wash out fine detail in bright areas. You can view bright clouds or textured white areas.
5. Go to Customize picture mode > Picture enhancement. Adjust to the setting that gives the best overall mid-range brightness. This should have minimal effect on blacks and whites.
6. Go to Customize picture mode > Color temperature. Adjust to the setting where whites and colors look best.
7. Go to Color settings > Color saturation. Adjust to the setting where colors look most natural.
8. Go to Color settings > Tint. Adjust to the setting where colors look most natural.
9. Go to Advanced Color. Adjust Red, Green, and Blue to the settings where the colors appear most natural.
10. Go to Customize picture mode > White intensity. Adjust this setting above 0 as needed to brighten the picture. Note that color accuracy drops as white intensity increases.
11. Repeat all steps if necessary.

Adjusting other picture settings

The on-screen menu provides many settings that allow you to fine-tune the picture.

1. Press enter, and go to Picture.
2. Change the picture adjustments as needed.
   - From the Picture menu, you can change many picture options, such as brightness, contrast, and picture shape, as well as customize the picture modes.

To get descriptions for all available picture adjustments, see “Picture menu” on page 36.
Adjusting the sound settings (certain models only)

You can control the volume of the projector’s speaker or any connected speakers:

- To change the volume, press enter, go to Setup > Volume, and change the setting.
- To turn the sound on or off temporarily, press enter, go to Setup > Mute, and mute the sound.

Adjusting the projector setup

1. Press enter, and go to Setup.
2. Set the setup adjustments as needed.

From the Setup menu, you can select settings, such as menu language, projector position, and menu timeout.

To get descriptions for all available setup adjustments, see “Setup menu” on page 35.

Preventing unauthorized use

You can prevent unauthorized people from using the projector by creating a secret button sequence that is required for the projector to turn on. The unlock sequence is a series of 4 to 8 arrow buttons. If the buttons are not pressed in the order you specify, the projector does not turn on. Use the following steps to set or clear an unlock sequence.

1. Press enter, go to Setup > Advanced setup > Projector lock, and press enter.
2. If an old unlock sequence is set, press the buttons according to the old sequence when prompted, and then press enter.
3. To set a new unlock sequence, press the arrow buttons for the new sequence, and then press enter.

To clear the unlock sequence and remove this protection, press only enter.
4. When prompted, confirm the new sequence and press enter.

NOTE: If you set an unlock sequence, you must press the sequence every time you turn on the projector. The sequence protects the projector only when the projector is turning on, not at any other time.

If you forget the unlock sequence, you must call HP support to unlock the projector. You must have the projector and your proof of purchase.
Using the on-screen menu

Changing settings using the on-screen menu

You can change the on-screen menu settings with the buttons on either the projector or the remote control.

1. Press enter on the projector or remote control. This displays the on-screen menu.
2. Press up or down to highlight the desired menu icon, then press right to move into that menu.
3. Press up or down to highlight a setting, then press enter to begin adjusting the setting.
4. Press left or right, or press up or down, to adjust the setting, as prompted.
5. Press enter to return to the menu.
6. To go to a different menu, press left and select a menu.
7. To close the on-screen menu, press the exit button.

If you do nothing for a period of time, the on-screen menu closes. To change the amount of time until the on-screen menu closes, press enter and select Setup > Timeout for menu.

TIP: To exit from any on-screen menu or adjustment, press the exit button.

Changing the default settings

The on-screen menus enable you to return selected or all projector settings to saved default values. These values are originally the factory defaults, but you may prefer to replace the factory defaults with a custom set of your own, using the following procedure. (You can also restore the original factory defaults if needed.)

NOTE: This procedure will normally be performed by a system administrator.

1. Press enter on the projector or remote control. This displays the on-screen menu.
2. Use the on-screen menus to select the desired settings for all inputs and picture modes.
3. Select Help > Diagnostics....
4. On the remote or the projector, press the up and down buttons in this sequence to open the default settings menu:

   up – up – down – down – up – down ( ▲ ▲ ▼ ▼ ▲ ▲ )

5. Press enter to save the projector’s current settings as the new defaults. (You can also press the exit button to restore the original factory default settings.)
## Setup menu

<table>
<thead>
<tr>
<th>Setup menu</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keystone</td>
<td>Corrects the slanted sides of the picture. This compensates for a projector that is too high or low relative to the screen.</td>
</tr>
<tr>
<td>Reset keystone</td>
<td>Resets the keystone correction to zero (no correction).</td>
</tr>
<tr>
<td>Volume</td>
<td>Adjusts the loudness of the projector’s audio (certain models only).</td>
</tr>
<tr>
<td>Mute</td>
<td>Temporarily turns off the projector’s audio (certain models only).</td>
</tr>
<tr>
<td>Projector position</td>
<td>Adjusts the picture to match the orientation of the projector: upright or upside-down, in front of or behind the screen. Inverts or reverses the image accordingly.</td>
</tr>

Performing routine maintenance

Getting the projector status

To get the projector status:

▲ Press the enter button on the projector or remote control and go to Help.

This screen shows information and status for the projector.

Cleaning the projector lens

You can clean the front lens of the projector using the following recommendations. You cannot clean any of the internal surfaces.

- To minimize the risk of damaging or scratching the lens surface, blow dust particles off the lens with clean, dry, deionized air.
- If this method does not work, use the following method:
  a. Wipe the lens in a single direction with a clean, dry cloth. Do not wipe back and forth across the lens.
  b. If the cloth is dirty or smears the lens, wash the cloth. If the cloth is still dirty after washing it or the fabric is damaged, replace it.

**CAUTION:** Cleaning requires special consideration:

- Do not spray any type of fluid or cleaner directly on the lens surface. Cleaners might damage the lens.
- Do not use fabric softener when washing a cleaning cloth or softener sheets when drying the cloth. Chemicals on the cloth might damage the surface of the lens.
- Do not store a cleaning cloth in contact with the lens for a long time because doing so contaminates the lens with dye from the cloth. The cloth can be contaminated if left in the open air.
Replacing the lamp module

As the projector operates over time, the brightness of the projector lamp gradually decreases and the lamp becomes more susceptible to breakage. You can install a new lamp at any time to bring the projector up to factory-fresh brightness. We recommend replacing the lamp if a warning message is displayed.

**WARNING!** Replacing the lamp module requires special consideration:

- To reduce the risk of injury, be careful when removing the lamp module as broken glass might be present. HP also recommends wearing goggles and gloves when removing the lamp module. If the lamp is broken, contact HP about repairs that might be required due to glass fragments.
- The lamp in this digital projector contains mercury. If the lamp breaks, adequately ventilate the immediate area, discard any nearby food and drink, and thoroughly clean the table surface around the projector. Wash your hands after cleaning the area or handling a broken lamp. Note that disposal of this lamp may be regulated under applicable environmental laws due to presence of mercury. For disposal or recycling information, please contact your local authorities or the Electronic Industries Alliance (www.eiae.org). For additional safety information about the lamp in this digital projector, please see: www.hp.com/hpinfo/globalcitizenship/environment/productdata
- Because the lamp assembly operates at a very high temperature, wait 30 minutes before removing the lamp module.

1. Turn off the projector and allow it to cool for 30 minutes.
2. If the projector is installed in a ceiling mount, remove it from the mount.
3. Unplug the power cord.
4. Loosen the two screws in the lamp cover 1 and remove the cover 2.

5. Remove the two screws 3 from the lamp module, raise the handle 4, and lift out the module 5.

6. Insert the new lamp module into the projector and tighten the two screws.
7. Replace the lamp cover and tighten the two screws.
8. Turn on the projector. If the lamp does not turn on after the warm-up period, try reinstalling the lamp.
9. Press enter, go to Setup > Advanced setup > Reset lamp hours, and press enter.
Replacing the battery in the remote control

1. Use a ballpoint pen to hold the battery latch toward the center, then pull out the battery holder ①.
2. Insert the new battery ② in the holder.
3. Push the holder ③ into the remote control.

When discarding old batteries, contact your local waste-disposal provider regarding local restrictions on the disposal or recycling of batteries.

[Diagram showing the steps to replace the battery]
Upgrading the projector

Updating the firmware

HP might periodically release updated versions of the projector firmware to enhance the projector performance. The projector firmware version is shown in the on-screen menu at Help. Check for updated versions at http://www.hp.com/support.

USB method

1. On a computer with a USB port, go to the HP projector upgrade website (see introduction for this section) and download the latest file intended for the xp7010/xp7030 series projector.
2. Connect a USB cable (available from HP) to the USB port on the computer. Do not connect the cable to the projector at this point.
3. On the computer, run the file you downloaded by double-clicking the file.
4. Follow the on-screen instructions. When prompted, connect the USB cable to the projector.

**NOTE:** Be sure to follow the “new hardware found” instructions exactly as shown on-screen, or the firmware will not be updated.
5 Installing Permanently

Installing the projector

Choosing cables

If you are permanently installing the projector or using it with long cables, consider the following suggestions when planning the installation:

• Use high-quality cables. Use only video cables that are made with 75-ohm cable and connectors. For high-resolution video, use low-loss video cables. For standard audio, use audio cables that are shielded.

• Minimize cable length as much as possible. For video cables longer than 6 m (20 ft), use low-loss cables. For standard audio cables longer than 6 m (20 ft), use 12-gauge wire.

• Do not run audio or video cables next to power or network cables. If they must cross, cross them at 90 degrees.

• If you are installing cables in walls, use cables with necessary approvals, such as Underwriters Laboratories (UL) approval.

• If you are running cables above a dropped ceiling, you must use plenum-rated cables if the space above the ceiling is open to the space above other rooms. You must use plenum-rated cables if you are running cables in a duct.

• Before installing cables permanently, check the setup with the final cables in the open.

Installing on a table

This installation is covered in detail in Chapter 1. See “Setting up the projector,” for more information.
Installing on the ceiling

**WARNING!** To minimize the risk of injury from improperly installed equipment, it is recommended that a professional installer performs the ceiling installation.

1. Attach the projector to the ceiling using an HP ceiling mount kit. Refer to the installation instructions provided with the ceiling mount kit.

2. After the projector is mounted on the ceiling, adjust the projector settings to match this setup. Press enter, go to Setup > Projector position, and select Front Ceiling.

Installing for rear projection

1. Place the projector 1.2 to 10 m (4 to 33 ft) behind a translucent screen that is designed for rear projection.
   See “Setting up the projector,” or “Installing on the ceiling,” above, for more instructions.

2. Press enter, go to Setup > Projector position. Then select Rear Table or Rear Ceiling.

Locking the projector

The projector includes a built in slot to secure the projector with a cable and lock (such as the Kensington MicroSaver lock system, available at many computer stores).

1. Wrap the cable around a secure object, such as a table leg. Loop the cable to create a slip knot around the stationary object, and be sure it cannot slip off.

2. Insert the lock ① into the hole and twist the key ②.
Controlling an external accessory

If your projector has a 12-volt trigger output port, the projector can automatically control one or more accessories. Certain types of accessories can use a 12-volt signal to trigger their actions, such as a motorized screen lowering and raising the screen. The output provides a 12-volt dc signal whenever the projector is on (200 mA maximum current output).

Requires:

- Two-wire cable with 3.5-mm × 1.3-mm barrel connector (+12 V on inner contact) with the following specifications.

+12V output electrical specification

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Output voltage</td>
<td>12 +/- 10% V</td>
</tr>
<tr>
<td>Output ripple</td>
<td>0.1 Vpp</td>
</tr>
<tr>
<td>Maximum output current</td>
<td>200 mA</td>
</tr>
<tr>
<td>Maximum rush current</td>
<td>2.0 A</td>
</tr>
<tr>
<td>Maximum rush current duration</td>
<td>10 ms</td>
</tr>
</tbody>
</table>
Connecting to a room controller

If your projector has a serial port, you can connect the projector to a room controller using a serial (RS-232) cable. After you program the room controller using the following commands, you can use the room controller to operate the projector and other components of your installation.

Serial connections

The serial port on the projector uses a female, mini-DIN 6, RS-232 connector:

- Pin 3: data sent to the projector (RX)
- Pin 5: data sent from the projector (TX)
- Pins 1, 4, and 6: not connected
- Pin 2: ground (GND)
- 7: metal frame (shroud)

The room controller must use the following serial (RS-232) settings:
- 9600 baud
- 1 start bit + 8 data bits (D0=LSB, D7=MSB) + 1 stop bit
- No parity
- Full duplex communication channels (no flow control)
- No handshaking

TIP: Go to http://www.hp.com/support for additional information.
Examples of room controller commands

In the following examples, “<CR>” and “<LF>” represent a carriage return and line feed, respectively.

Commands are sent to the projector as “requests” which consist of an asterisk (*) prefix, the command name, any needed parameter, and a carriage return <CR> as a terminator:

* command = parameter <CR>

Requests can contain only ASCII alphanumeric characters. Blanks (spaces) are allowed, except within keywords and numbers. Line feeds <LF> are ignored.

The following table shows the specific syntax to use for various requested tasks.

<table>
<thead>
<tr>
<th>To perform this task...</th>
<th>Use this request syntax...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change a setting to a specified value</td>
<td>*command=value&lt;CR&gt;</td>
</tr>
<tr>
<td>Ask the current setting</td>
<td>*command=?&lt;CR&gt;</td>
</tr>
<tr>
<td>Increment a setting</td>
<td>*command=+&lt;CR&gt;</td>
</tr>
<tr>
<td>Decrement a setting</td>
<td>*command=–&lt;CR&gt;</td>
</tr>
<tr>
<td>Invoke an action (no parameter needed)</td>
<td>*command&lt;CR&gt;</td>
</tr>
</tbody>
</table>

In general, every request sent to the projector generates one or more notification messages, which are sent to the room controller. Actions initiated by the projector can also generate notifications.

The projector always sends notifications whenever a setting changes, whether as the result of a request from a controller, or as the result of an action, such as a button press or menu change. Some requested setting changes take time to perform, or are carried out in stages. Because of this, requests might produce delayed notifications.
The following table lists the types of notifications generated in various situations.

<table>
<thead>
<tr>
<th>This type of request...</th>
<th>Generates this type of notification...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Modify a setting</td>
<td>Echoes the request command and shows the resulting value:</td>
</tr>
<tr>
<td></td>
<td><strong>Request:</strong> <code>*BRT=65&lt;CR&gt;</code></td>
</tr>
<tr>
<td></td>
<td><strong>Notification:</strong> <code>*BRT=65&lt;CR&gt;&lt;LF&gt;</code></td>
</tr>
<tr>
<td>Query a setting</td>
<td>Echoes the request command and shows the resulting value:</td>
</tr>
<tr>
<td></td>
<td><strong>Request:</strong> <code>*CON=?&lt;CR&gt;</code></td>
</tr>
<tr>
<td></td>
<td><strong>Notification:</strong> <code>*CON=40&lt;CR&gt;&lt;LF&gt;</code></td>
</tr>
<tr>
<td>Execute an action</td>
<td>Echoes the request command:</td>
</tr>
<tr>
<td></td>
<td><strong>Request:</strong> <code>*NXT&lt;CR&gt;</code></td>
</tr>
<tr>
<td></td>
<td><strong>Notification:</strong> <code>*NXT&lt;CR&gt;&lt;LF&gt;</code></td>
</tr>
</tbody>
</table>

Incorrect commands cause the following types of notifications:

- No asterisk at start of command—no response
- Unrecognized command name—command with “?” added
- Command that is currently unavailable—command with “?” added
- Invalid parameter—command with current value
- Action command with unnecessary parameter—action command
- Action command that is unavailable—action command

The following simplified example shows how the projector typically responds to a request to change the active input source. Note that the three latter notifications are delayed.

**Request:**
`*RSRC=4<CR>`

**Notification:**
`*RSRC=4<CR><LF>` (acknowledges request)
`*SRC=0<CR><LF>` (projector is attempting to acquire source 4, and in the interim has no valid source)
`*SRC=4<CR><LF>` (source 4 is now active)
`*BRT=60<CR><LF>` (brightness has been modified for source 4)
`*CSPC=?<CR><LF>` (color space is not supported for this input)
## Room controller commands

In the following tables, if the parameter listing for a particular command is “None,” that command requires no parameter. Some commands are valid only when the projector is turned on, STAT=1. Some commands are available only when specific input sources are active.

### Source function

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SRC</td>
<td>?</td>
<td>Queries the current active input source: 0=no active source, 1=VGA-in, 3=composite video, 4=S-video, 8=DVI.</td>
</tr>
<tr>
<td>RSRC</td>
<td>1, 3, 4, 8, ?</td>
<td>Attempts to use the specified source as the active input source, or queries the last source requested: 1=VGA-in, 3=composite video, 4=S-video, 8=DVI.</td>
</tr>
<tr>
<td>NXT</td>
<td>None</td>
<td>Switches to the next input source.</td>
</tr>
<tr>
<td>AUTO</td>
<td>0, 1, ?</td>
<td>Sets or queries automatic searching inputs for signal: 0=no searching, 1=searching.</td>

6 Fixing Problems

Troubleshooting suggestions

If you have a problem with your projector, check the following statement that most closely matches the nature of the problem, then look in that section of this chapter:

- “Warning light problems” on page 55
- “Start-up problems” on page 56
- “Picture problems” on page 56
- “Sound problems” on page 59
- “Interruption problems” on page 59
- “Remote control problems” on page 60

**TIP:** If these suggestions do not solve your problem, go to http://www.hp.com/support for additional information. To contact HP, refer to the support guide included with the projector.

Warning light problems

**If both red warning lights are blinking:**
- Allow the projector to cool down after it turns off. If this condition occurs after you restart the projector, an internal component has failed. Contact HP for assistance.

**If the red temperature light is on:**
- Allow the projector to cool down after it turns off. Be sure that nothing is near or blocking the vents on the projector, and that the vents are free of lint and other objects. Remove any sources of excess heat in the room. Observe temperature and altitude limits (see “Specifications” on page 61). If the warning light turns on or blinks after you restart the projector, contact HP for assistance.

**If the red temperature light is blinking:**
- Contact HP for assistance.
If the red lamp light is on:
  • Install a new lamp. If the lamp light is on after you install a new lamp module, remove and reinstall the lamp module. If a new lamp does not fix the problem, contact HP for assistance.

If the red lamp light is blinking:
  • Contact HP for assistance.

If the red lamp light is flickering quickly:
  • Check that the cover over the lamp at the side of the projector is correctly installed and fully attached. Check the tab at the top of the cover and latch at the bottom.

Start-up problems

If no lights or sounds turn on:
  • Be sure that the power cable is securely connected to the projector and the other end is plugged into an outlet with power.
  • Be sure the disconnect switch is turned on.
  • Press the power button again.
  • Unplug the power cord for 15 seconds, then plug it in and press the power button again.

Picture problems

If a “scanning” or “waiting” message is displayed on a blank screen:
  • Press the source button on the projector or remote control one or more times until the correct source name is selected.
  • Be sure the external source is turned on and connected.
  • For a computer connection, ensure your notebook computer’s external video port is turned on. Refer to the computer manual. On some notebooks, for example, press the FN+F4 or FN+F5 function keys to turn on the external video port.

If the wrong input source is displayed:
  • Press the source button on the projector or the remote control one or more times to select another active input source.
If the image is out of focus:

- Be sure the lens cover is open.

- While displaying the on-screen menu, adjust the focus ring. (The image size should not change; if it does, you are adjusting the zoom, not the focus.)

- Ensure the projection screen is 1.2 to 10 m (4 to 33 ft) from the projector.

- Check the projection lens to see if it needs cleaning.

- For a computer connection, set the display resolution as the computer to the same resolution as the projector, 800 × 600 or 1024 × 768 (see “Specifications” on page 61). If the computer has multiple monitors, adjust the resolution of the monitor assigned to the projector.

- For a computer connected to the S-video port, the picture cannot be as high resolution as what you see on the computer display.

If an upside-down or reversed image is displayed:

- The projector has been set to the wrong position setting. Press enter, go to Setup > Projector position, and select the correct setting.

If the image is too small or too large:

- Adjust the zoom ring on top of the projector.

- Move the projector closer to or farther from the screen.

- On the projector or remote control, press the picture mode button one or more times to see if one of the picture modes makes the image the correct size.

- Press enter, go to Picture > Customize picture mode > Aspect ratio. Try the different settings.

- If the source device sends wide-screen output, press enter, go to Source, and try setting Widescreen input to On. Otherwise, set it to Off.

If the image has slanted sides:

- As much as possible, reposition the projector so that it is centered on the screen and below the bottom or above the top of the screen.

- On the projector, press enter, go to Setup > Keystone, and adjust until the sides are vertical.
If the image is stretched:
  • On the projector or remote control, press the picture mode button one or more times to see if one of the picture modes makes the image the correct size.
  • Press enter, go to Picture > Customize picture mode > Aspect ratio. Try the different settings.
  • If the source device sends wide-screen output, press enter, go to Source, and try setting Widescreen input to On. Otherwise, set it to Off.

If the projected colors seem slightly wrong:
  • See “Adjusting the picture for best color” on page 32.
  • Press enter, go to Help > Diagnostics, and run the color test.

If the projected colors seem completely wrong:
  • Be sure the pins on the cable connectors are not bent or broken.
  • Press enter, go to Help > Diagnostics, and run the color test.
  • Press enter, go to Picture > Color settings > Reset color settings, and press enter.
  • Press enter, go to Setup > Advanced settings > Reset all settings, and press enter.

If the picture is not clear (ghost images, smearing, poor quality):
  • Be sure the video cable you are using is coaxial cable rated at 75 ohms. Any other cable or impedance rating can reduce picture quality.
  • The video cable connecting the video source to the projector probably must be higher quality. See “Choosing cables” on page 44.

If several picture settings seem completely wrong and you cannot fix them:
  • Press enter, go to Picture > Color settings > Reset color settings, and press enter.
  • Press enter, go to Setup > Advanced settings > Reset all settings, and press enter.

If a scrolling or cut-off image is displayed for a computer connection:
  • Press the auto sync button on the projector or remote control.
  • Turn everything off. Then power on the projector first and power on the notebook or desktop computer second.
  • If the previous steps do not correct the display image, adjust the resolution of the notebook or desktop computer to the same resolution as the projector, 800 × 600 or 1024 × 768 (see “Specifications” on page 61). If the computer has multiple monitors, adjust the resolution of the monitor assigned to the projector.
If the image is flickering or unstable for a computer connection:
• Press the auto sync button on the projector or remote control.
• Press enter, go to Picture > VGA settings, and adjust Frequency or Tracking.

If the image disappears from the computer screen:
• For a notebook computer, you might be able to turn on both the external VGA port and the built-in screen. Refer to the computer manual.
• Connect a monitor to the VGA-out port.

If text or lines from a computer display seem rough or uneven:
• Check the focus adjustment.
• Press enter, go to Setup > Reset keystone, and press enter.

Sound problems

If no sound is coming out of the projector:
• Be sure you have an audio cable securely connected between the projector and the source device.
• Press enter, go to Setup, and check that Mute is set to Not muted and Volume is correct.
• Press enter, go to Help > Diagnostics, and run the sound test.
• Be sure that the mute and volume settings are correct on the source device, such as a VCR, camcorder, or computer.

 Interruption problems

If the projector stops responding to all controls:
• If possible, turn off the projector, then unplug the power cord and wait at least 15 seconds before reconnecting power.

If the lamp shuts off during a show:
• A minor power surge might cause the lamp to shut off. This is normal. Wait a few minutes, then power on the projector.
• If a red warning light is on or blinking, see “Warning light problems” on page 55.

If the lamp burns out or makes a popping sound:
• If the lamp burns out and makes a popping sound, the projector will not turn back on until the lamp module has been replaced.
• If the lamp breaks, contact HP about repairs that might be required due to glass fragments.
Remote control problems

If the remote control does not operate:

- Be sure nothing is blocking the remote control receiver on the front or back of the projector. Move to within 8 m (26 ft) of the projector.
- Aim the remote control at the screen or at the front or back of the projector.
- Move the remote control so it is more directly in front of or behind the projector and not as far to the side.
- Press enter, go to Help > Diagnostics, and run the remote control test.
- Replace the battery in the remote control.

Testing the projector

Running the projector diagnostics

The on-screen menu contains diagnostic tests you can use to verify the proper operation of the projector and the remote control.

1. Press enter and go to Help > Diagnostics.
2. Select a test and press enter.
3. Follow the displayed instructions.
This chapter lists the specifications, safety information, and regulatory information for the projector.

### Specifications

Because HP continually improves its products, the following specifications are subject to change. For the latest specifications, visit the HP website at http://www.hp.com.

Safety information

Mercury safety

**WARNING!** The lamp in this digital projector contains mercury. If the lamp breaks, adequately ventilate the immediate area, discard any nearby food and drink, and thoroughly clean the table surface around the projector. Wash your hands after cleaning the area or handling a broken lamp. Note that disposal of this lamp may be regulated under applicable environmental laws due to presence of mercury. For disposal or recycling information, please contact your local authorities or the Electronic Industries Alliance (www.eiae.org). For additional safety information about the lamp in this digital projector, please see: www.hp.com/hpinfo/globalcitizenship/environment/productdata

Regulatory information

This section presents information that shows how your digital projector complies with regulations in certain regions. Any modifications to your digital projector not expressly approved by HP could void the authority to operate the digital projector in these regions.

**U.S.A.**

This digital projector has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This digital projector generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it can cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this digital projector does cause harmful interference to radio or television reception (which can be determined by unplugging the unit), try the following:

- Reorienting or relocating the receiving antenna.
- Relocating the digital projector with respect to the receiver.
- Connecting the digital projector’s power cord to another power outlet.
Connections to peripheral devices

To maintain compliance with FCC Rules and Regulations, use properly shielded cables with this device.

For more information, consult your dealer, an experienced radio/television technician, or, prepared by the Federal Communications Commission, How to Identify and Resolve Radio-TV Interference Problems. This booklet is available from the U.S. Government Printing Office, Washington, DC 20402, Stock Number 004-000-00345-4. At the first printing of this manual, the telephone number was 202-512-1800.

Canada

This Class B digital apparatus complies with Canadian ICES-003.

Japan

この装置は、情報処理装置等電波障害自主規制協議会（V C C I）の基準に基づくクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると受信障害を引き起こすことがあります。取り扱い説明書に従って正しい取り扱いをして下さい。

製品には、同梱された電源コードをお使い下さい。同梱された電源コードは、他の製品では使用出来ません。

Korea

사용자 안내문 : B 급 기기

이 기기는 비업무용으로 전자파적합등록을 받은 기기이오니, 주거지역 에서는 물론, 모든 지역에서 사용 하실 수 있습니다.

International

For regulatory identification purposes, your product is assigned a regulatory model number. The regulatory model number for your product is listed in the declaration of conformity. This regulatory number is different from the marketing name and product number.

Regulatory model number: CRVSB-05LE
Declaration of conformity

According to ISO/IEC Guide 22 and EN 45014

Manufacturer's name: Hewlett Packard Company
Manufacturer's address: Hewlett Packard Company Display Technologies and Products
1000 NE Circle Blvd.
Corvallis, OR 97330-4239

Declares, that the product(s):

Product name: Digital Projector
Model numbers: xp7010, xp7030 series
Regulatory model: CRVSB-05LE

Conforms to the following Product Specifications:

Safety:
IEC 60950-1: 2001 / EN 60950-1: 2001
GB4943:1995
EMC:
IEC 61000-3-2:1995 / EN 61000-3-2:2000
GB9254-1998
FCC Title 47 CFR, Part 15 Class B/ANSI C63.4: 2003
AS/NZS 3548: 1995 Rules and Regulations of Class B
VCCI

Supplementary information:
The product herewith complies with the requirements of following Directives and carries the CE marking accordingly:
- EMC Directive: 89/336/EEC

[1] The product was tested in a typical configuration with Hewlett Packard Personal Computer peripherals.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This
device may not cause harmful interference, and (2) this device must accept any interference received, including
interference that may cause undesired operation.

Corvallis, Oregon, October 5, 2005

Recycling information

Disposal of Waste Equipment by Users in Private Households in the European Union

This symbol on the product or on its packaging indicates that this product must not be disposed of with your other household waste. Instead, it is your responsibility to dispose of your waste equipment by handing it over to a designated collection point for the recycling of waste electrical and electronic equipment. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

Evacuation des équipements usagés par les utilisateurs dans les foyers privés au sein de l’Union européenne

La présence de ce symbole sur le produit ou sur son emballage indique que vous ne pouvez pas vous débarasser de ce produit de la même façon que vos déchets courants. Au contraire, vous êtes responsable de l’évacuation de vos équipements usagés et à cet effet, vous êtes tenu de les remettre à un point de collecte agréé pour le recyclage des équipements électriques et électroniques usagés. Le tri, l’évacuation et le recyclage séparés de vos équipements usagés permettent de préserver les ressources naturelles et de s’assurer que ces équipements sont recyclés dans le respect de la santé humaine et de l’environnement. Pour plus d’informations sur les lieux de collecte des équipements usagés, veuillez contacter votre mairie, votre service de traitement des déchets ménagers ou le magasin où vous avez acheté le produit.

Entsorgung von Elektrogeräten durch Benutzer in privaten Haushalten in der EU

Smaltimento di apparecchiature da rottamare da parte di privati nell’Unione Europea

Questo simbolo che appare sul prodotto o sulla confezione indica che il prodotto non deve essere smaltito assieme agli altri rifiuti domestici. Gli utenti devono provvedere allo smaltimento delle apparecchiature da rottamare portandole al luogo di raccolta indicato per il riciclaggio delle apparecchiature elettriche ed elettroniche. La raccolta e il riciclaggio separati delle apparecchiature da rottamare in fase di smaltimento favoriscono la conservazione delle risorse naturali e garantiscono che tali apparecchiature vengano rottamate nel rispetto dell’ambiente e della tutela della salute. Per ulteriori informazioni sui punti di raccolta delle apparecchiature da rottamare, contattare il proprio comune di residenza, il servizio di smaltimento dei rifiuti locale o il negozio presso il quale è stato acquistato il prodotto.
Eliminación de residuos de aparatos eléctricos y electrónicos por parte de usuarios domésticos en la Unión Europea

Este símbolo en el producto o en el embalaje indica que no se puede desecho el producto junto con los residuos domésticos. Por el contrario, si debe eliminar este tipo de residuo, es responsabilidad del usuario entregarlo en un punto de recolección designado de reciclado de aparatos electrónicos y eléctricos. El reciclaje y la recolección por separado de estos residuos en el momento de la eliminación ayudará a preservar recursos naturales y a garantizar que el reciclaje proteja la salud y el medio ambiente. Si desea información adicional sobre los lugares donde puede dejar estos residuos para su reciclado, póngase en contacto con las autoridades locales de su ciudad, con el servicio de gestión de residuos domésticos o con la tienda donde adquirió el producto.

Likvidace vysloužilého zarizení uživatelů v domácnosti v zemích EU

Tato znacka na produktu nebo na jeho obalu označuje, že tento produkt nesmí být likvidován prostým vyhozením do běžného domovního odpadu. Odpovídáte za to, že vysložilé zarizení bude predáno k likvidaci do stanovených sběrných míst určených k recyklaci vysložilých elektrických a elektronických zariíjen. Likvidace vysložilého zarizení samostatným sburem a recyklaci napomáhá zachování přírodních zdrojů a zajišťuje, že recyklace probíhne způsobem chránícím lidské zdraví a životní prostředí. Další informace o tom, kam můžete vysložilé zarizení predáť k recyklaci, můžete riskovat od úřadu místní samosprávy, od společnosti provádějící svoz a likvidaci domovního odpadu nebo v obchode, kde jste produkt zakoupili.

Bortskaffelse af affaldsstyr for brugere i private husholdninger i EU

Afvoer van afgedankte apparatuur door gebruikers in particuliere huishoudens in de Europese Unie

Dit symbool op het product of de verpakking geeft aan dat dit product niet mag worden afgevoerd met het huisvuil. Het is uw verantwoordelijkheid uw afgedankte apparatuur af te leveren op een aangewezen inzamelpunt voor de verwerking van afgedankte elektrische en elektronische apparatuur. De gescheiden inzameling en verwerking van uw afgedankte apparatuur draagt bij tot het sparen van natuurlijke bronnen en tot het hergebruik van materiaal op een wijze die de volksgezondheid en het milieu beschermt. Voor meer informatie over waar u uw afgedankte apparatuur kunt inleveren voor recycling kunt u contact opnemen met het gemeentehuis in uw woonplaats, de reinigingsdienst of de winkel waar u het product hebt aangeschaft.

Eramajapidamistes kasutuselt kõrvaldatavate seadmete käitlemine Euroopa Liidus

Kui tootel või toote pakendil on see sümbol, ei tohi seda toodet visata olmejäätmete hulka. Teie kohus on viia tarbetuks muutunud seade selleks ettenähtud elektri- ja elektroonikaseadmete utiliseerimiskohta. Utiliseeritavate seadmee eraldi kogumine ja käitlemine aitab säästa loodusresursi ning tugevdab, et käitlemine toimub neist teisesteh ja keskkonnale ohutult. Lisateavet selle kohta, kuhu saate utiliseeritava seadme käitlemiseks viia, saate küsida kohalikust kohalikust omavalitsusest, olmejäätmete utiliseerimispunktist või kauplusest, kust te seadme ostsite.

Hävitettävien laitteiden käsitteley kotitalouksissa Euroopan unionin alueella

Apórfηση χρήσεων συσκευών στην Ευρωπαϊκή Ένωση

To παράδειγμα αυτόν τον συγκεκριμένο αναφέρεται στη συσκευασία του υπολογιστή ότι το προϊόν αυτό δεν πρέπει να περιμένει μαζί με όλα τα άλλα απορρίμματα. Αντίθετα, η συσκευασία αυτή εκφράζει την ανάγκη για την απορρίψη της χρήσιμης συσκευής με μια ανθρώπινη μονάδα συλλογής απορριμμάτων για την ανακύκλωση χρήσιμων ηλεκτρικών και ηλεκτρονικών εξοπλισμών. Η συμπεριφορά της συσκευασίας των χρησιμών συσκευών θα υπέρβαλε στη διαχείριση των υπολογιστών πόρων και τη διασφάλιση ότι θα ανακυκλώσουμε με τρόπο ώστε να προστατεύεται η υγεία των ανθρώπων και το περιβάλλον. Για να διατηρηθεί η πληροφορίας εμπιστοσύνη με το που μπορείται να απορριπτείται τα χρήσιμα συσκευάσματα για ανακύκλωση, επικοινωνήστε με την κατά τέσσερα αρμόδια αρχή ή το κάταστο από το οποίο αγόρασατε το προϊόν.
A hulladékkanyagok kezelése a magánháztartásokban az Európai Unióban

Ez a szimbólum, amely a terméken vagy annak csomagolásán van feltüntetve, azt jelzi, hogy a termék nem kezelhető együtt az egyéb háztártási hulladékkal. Az Ön feladata, hogy a készülék hulladékkanyagait eljuttassa olyan kijelölt gyűjtőhelyre, amely az elektromos hulladékkanyagok és az elektronikus berendezések újrahasznosításával foglalkozik. A hulladékkanyagok elkülönített gyűjtése és újrahasznosítása hozzájárul az emberi és környezetbaráti fejlődéshez. Az elektronikus berendezések és a hulladékanyagokat, forduljon a helyi önkormányzathoz, a háztártási hulladék begyűjtésével foglalkozó vállalathoz vagy a termék forgalmazójához.

Lietotāju atributešanas no nederīgām ierīcēm Eiropas Savienības privātajās mašīnīnveida

Šis simbolis uz ierīces vai tās iepakojuma norāda, ka šo ierīci nedrīkst izmest kopā ar citiem komunālajiem atkritumiem. Tas attiecas arī uz to, ka šo ierīci nedrīkst izmest kopā ar citiem komunālajiem atkritumiem, kas būtu iekļauti citā veikalā ārkārtas situācijās. Drošībai un tirdzniecības prasībām ir svarīgi izmantot atbilstošus izmantošanas pakalpojumus, piemēram, ratu klātnes, kas specializētas tādā veidā, lai samazinātu atkritumu izveidošanos un nodrošinātu tirdzniecības drošību.

Europos Savojos vartotojų ir privačių namų ūkių atliekamos įrangos išmetimas

Šis simbolis ant produktų arba jo pakuočių nurodo, kad produktas negali būti išmetamas kartu su kitomis namų ūkių atliekomis. Šis simbolis nurodo, kad produktas negali būti išmetamas kartu su kitomis namų ūkių atliekomis. Šis simbolis yra naudojamas, nes jo išvedimas kartu su kitomis namų ūkių atliekomis gali turėti nevaisingą įtaką aplinkai. Žr. kitais metais deguoninio veido reljefą ir jį leiskite aplinkai.
Kassering av förbrukningsmaterial, för hem- och privatanvändare i EU

欧盟国家/地区用户在私人住宅中对废旧设备的处理
产品或包装上包括此标志表示此产品不得作为住宅垃圾来处理。而且您有责任将废旧设备送到指定的废旧电力电子设备回收点。通过这种方式来处理废旧设备。废旧设备的分类收集与回收有助于节约自然资源，保证以有利于人类健康和环保的方式回收废旧设备。有关废旧设备回收的详细信息，请与当地市政机关、家庭垃圾处理站或购买产品的商店联系。
